

## IN THE CLAIMS:

Please amend claims 2, 23, 31-33 and 38 as follows:

1. (previously presented) A lighting system for stage, theatrical and architectural lighting, comprising

frame means for supporting a plurality of light emitting diodes, said frame means including a substantially rigid mounting template for providing a substantially fixed hollow volume;

means for mounting each diode of said plurality of diodes within said hollow volume of said frame means and simultaneously for positioning said plurality of diodes wherein each discrete diode light beam is directed to a predetermined, substantially fixed remote focal point (target zone) and thereupon directed to a predetermined illumination area, and

circuit board means structurally associated with said frame means for transmitting and controlling electrical voltage to said plurality of light emitting diodes.

2. (currently amended) [The lighting system in accordance with claim 1,]

A lighting system for stage, theatrical and architectural lighting, comprising

frame means for supporting a plurality of light emitting diodes, said frame means  
including a substantially rigid mounting template for providing a substantially fixed  
hollow volume;

means for mounting each diode of said plurality of diodes within said hollow  
volume of said frame means and simultaneously for positioning said plurality of diodes  
wherein each discrete diode light beam is directed to a predetermined, substantially fixed
